

CONTENTS

Preface

In The Next Issue

Communication and Sensor Networks

- 1** Generic Model and Architecture for Cooperative Objects in Wireless Sensor Networks
P. J. Maron, D. I. Minder, A. S. Lachenmann, O. Saukh and K. Rothermel
- 9** UWB Channel Characterisation and Modeling for Body-Centric and Personal Area Networks
Y. Hao, A. Alomainy, Y. Zhao and C. G. Parini
- 16** UWB Electric and Magnetic Monopole Antennas
X. Chen, J. Liang, P. Li and C. C. Chiau

Call for Papers

AJICT Special Issue on Rural Communications

The rapid growth of both fixed and wireless high speed networks have resulted to fundamental changes to the way of doing business and the lifestyle of people in many countries. Yet the economy of scale is such that the emphasis is on the densely populated areas. Many rural areas are not yet accessible to high speed networks owing to their remote locations and / or sparse population.

The perspectives of service operators and government, and the needs of rural habitants need to be taken into consideration. The needed services and the technology to provide such needs in rural areas are often different from those of the urban areas. Papers to address these issues with new technologies are welcome. Please submit online or discuss with the editors about the plan of your paper.

Deadline for submission: December 22, 2005

Notification of acceptance: January 31, 2006

Camera ready paper due: February 28, 2006

Publication date: March 2006
